Repair and Protection of Reinforced Concrete Structures

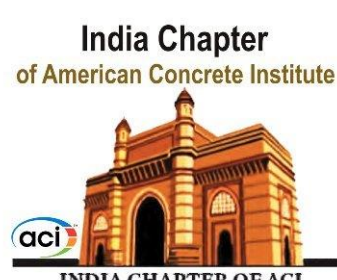

Er. Sunny Surlaker

President, India Chapter of American Concrete Institute |
Director, Institute For International Talent Development [IITD]

Deterioration of Reinforced Concrete structures is one of the major hitches globally. Apart from regular maintenance, majority of structures require extensive Repair and Protection. These structures deteriorate with age and the distress is manifested as cracking, splitting, delaminating, corrosion, etc. The repair materials / techniques suitable to a particular structure, is a prerequisite in order to guarantee safety of the structure as well as saving time and money. The proposed talk strives to review the modern construction chemicals and techniques for waterproofing, concrete repairs, concrete protection and concrete technology.
